

Demonstration Script

Session	Technical	Estimated Time	1 hour
	Infrastructure		

Purpose	To establish the implications of adopting the package from a supporting infrastructure perspective.
Attendees	Technical Team

Preparation	
--------------------	--

Activity	
	Present details of server platform vendors that have been approved for use with your software. Give details of any strategic alliances or partnerships you may have with these hardware vendors.
	Present <u>for at least 15 minutes</u> on available and recommended options with regards to high availability and non-stop solutions. Explain how you would implement redundant options, fault-tolerance and high availability within our environment.
	Present the potential implications of implementing the package with regards to network traffic. Provide information about the amounts of data transferred during typical transactions.
	Present how the package can be integrated with firewall technologies. Explain how any web-based element of your package can be secured.
	Present the package's underlying printing model. Detail compatibility with NT Server based printers and LPD devices.
	Present the specific hardware requirements of web enabled features of the package.
	Any other related information that supports your proposal.
